"Science is already complicated enough.
Finding the thing you studied yesterday shouldn't be."

a Cellfie guide by thatbrowncraft

01. WELCOME TO CELLFIE

Your little science corner for complicated things.

- Cellfie brings curated science knowledge, your own sources, study notes, comparisons, laboratory material and enrichment into one connected learning space.
- You do not have to use every feature at once. Pick the space that solves today's problem, then move outward when you need more.

Curated Knowledge

Structured Cellfie content designed for learning and revision.

Your library

Books, references, highlights, notes and source context that belong to you.

Your study Notes

Favorites, saved items, notes and reviewed states.

Online Knowledge

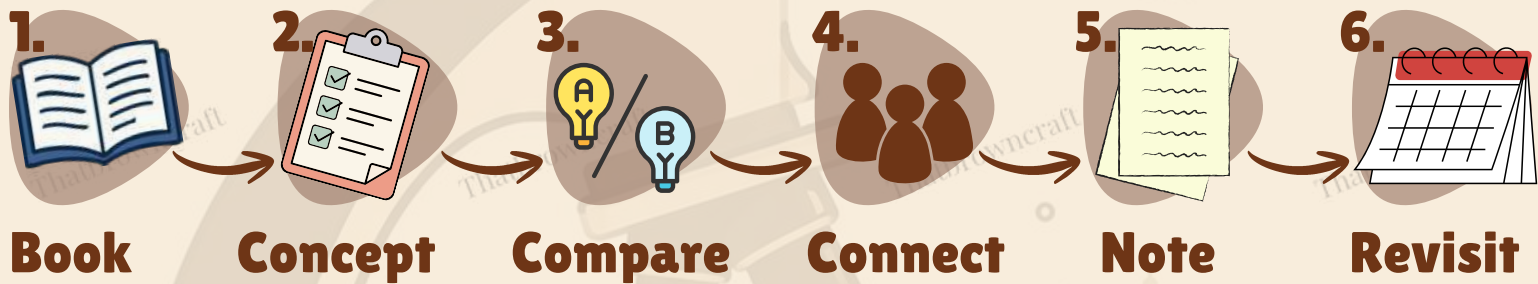

Optional outside information for deeper exploration.

Cellfie Tip:

Start with today's topic. You do not need to explore the whole app first.

02. HOW CELLFIE THINKS

Information becomes more useful when it can move between learning spaces without losing context.

A textbook may give you detail. A concept can turn that detail into focused understanding. Comparison Studio can separate two confusing ideas. Your notes capture what mattered. Study Vault helps you find it again.

03. WHERE TO GO FIRST?

Not sure which part of Cellfie you need?

Read my own book?

» *Library*

Build a concept?

» *Concepts*

Explore an organism?

» *Organism-explorer*

Learn practicals?

» *Laboratory*

Compare topics?

» *Comparison-studio*

Look up an element?

» *Periodic-table*

Find study trial?

» *Study vault*

Learn out of box?

» *Search*

Use your own source?

» *Library*

Go deeper online?

» *Online Knowledge*

04. DASHBOARD

Your Home Base

The Dashboard brings useful shortcuts and current study context together so you can pick up where your brain left off. Depending on the current build, this can include continuing study, saved material, reviewed items, favorites, notes and knowledge-related shortcuts.

When to use it?

Open the Dashboard when you are not sure what to do next, or when you want to jump back into something you were already studying.

05. LIBRARY

Your own books, finally living somewhere useful.

Library is where your personal sources can sit alongside your Cellfie study workflow. The existing manual describes Bookshelf, Notes and Sources, with reading tools such as page navigation, table of contents, page thumbnails, zoom, page slider, highlights and notes where supported. These are your sources. Cellfie's curated content is a separate layer. Importing a source does not turn it into permanent curated Cellfie knowledge.

Read

Annotate

Highlight

Organize

06. LIBRARY TO CONCEPT EXTRACTION

Give your sources enough context to become useful.

1. Add source

2. Tag it

3. Identify concept

4. Save it

- *When you add a book or reference, meaningful tags can describe its subject, level, topic or intended use. This helps Cellfie distinguish relevant source context instead of treating every book as equally useful for every concept.*
- *This does not mean Cellfie continuously scans every page of every book. The important idea is relevance: give a source useful context, and the Library can become more helpful when you investigate a related concept.*

Why Tag matters?

A tag such as science is broad. Tags such as biology, microbiology, class-11, cell-biology or staining tell a much clearer story.

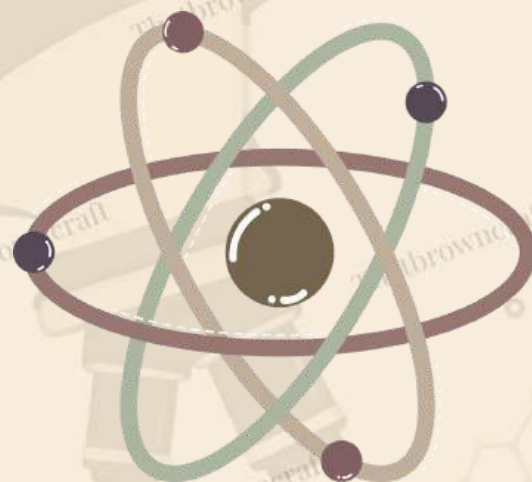

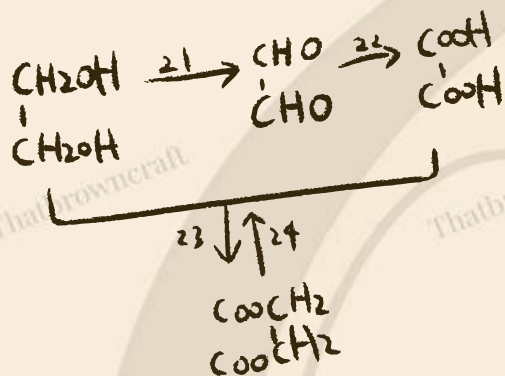

A Real example: Gram staining

- *Microbiology textbook: microbiology, bacteriology, staining, laboratory Organic chemistry textbook: chemistry, organic-chemistry, reactions*
- *For Gram staining, the microbiology source has clearly relevant context. The chemistry textbook should not become the main source simply because both belong to the broad world of science.*

Note: Please don't give a 900–page textbook one lonely tag called “science” and expect Cellfie to read your mind. Future–you deserves better metadata.

07. CONCEPTS

Turning scattered information into something your brain can actually hold.

Concepts are the focused learning space for Cellfie's structured science material. A concept can bring together a core explanation, revision information, exam focus, memory aids, connections, visuals and references where available.

CORE CONCEPTS

Understand the main idea first.

QUICK REVISION

Revisit it compactly

EXAM FOCUS

Keep useful revision points close.

MEMORY AID

Use recall hooks wherever possible.

CONNECTIONS

See how ideas relate.

REFERENCES

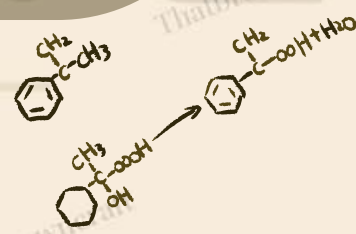

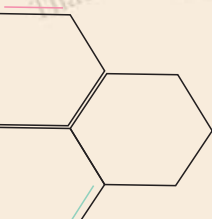

Keep a available source content

GEN Z NOTES

Gen Z Notes are informal, memory-friendly explanations or hooks.

They make difficult ideas approachable without replacing the proper scientific explanation. Think of it as the friend who says:

"Okay, forget the scary wording for a second. Here's what this actually means." The science still has to stay correct.

08. ORGANISM EXPLORER

A structured field guide for the tiny troublemakers, helpers and weirdos of biology.

Organism Explorer covers taxonomy, morphology, habitat, metabolism or physiology, pathogenicity, diseases, transmission, identification clues, biochemical traits, clinical, industrial or beneficial roles and related organisms where available.

USE ORGANISM EXPLORER WHEN A NAME IS NOT ENOUGH AND YOU WANT THE BIGGER PICTURE.

09. LABORATORY

The practical science bench of Cellfie.

Laboratory is broader than microbiology. It brings together practical and foundational material across biology, chemistry and physics.

PROTOCOLS

*Step-oriented procedures
where available.*

CONCEPTS

*Foundational practical
science.*

MEDIA

*Laboratory media &
Related info.*

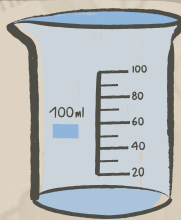

BIOCHEMICAL TESTS

*Tests, principle &
interpretation.*

BIOSAFETY

*Safety-oriented
laboratory knowledge.*

CALCULATOR

*Supported scientific
calculations.*

CLINICAL LAB

*Clinical-lab oriented
material.*

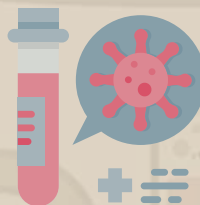

UNIT CONVERTER

*Convert common
scientific units.*

FORMULA HUB

*Formula-focused
study material.*

SAVED LAB ITEMS

*Keep useful laboratory
material close.*

GLASSWARES & EQUIPMENTS

*Know the tool &
it's use.*

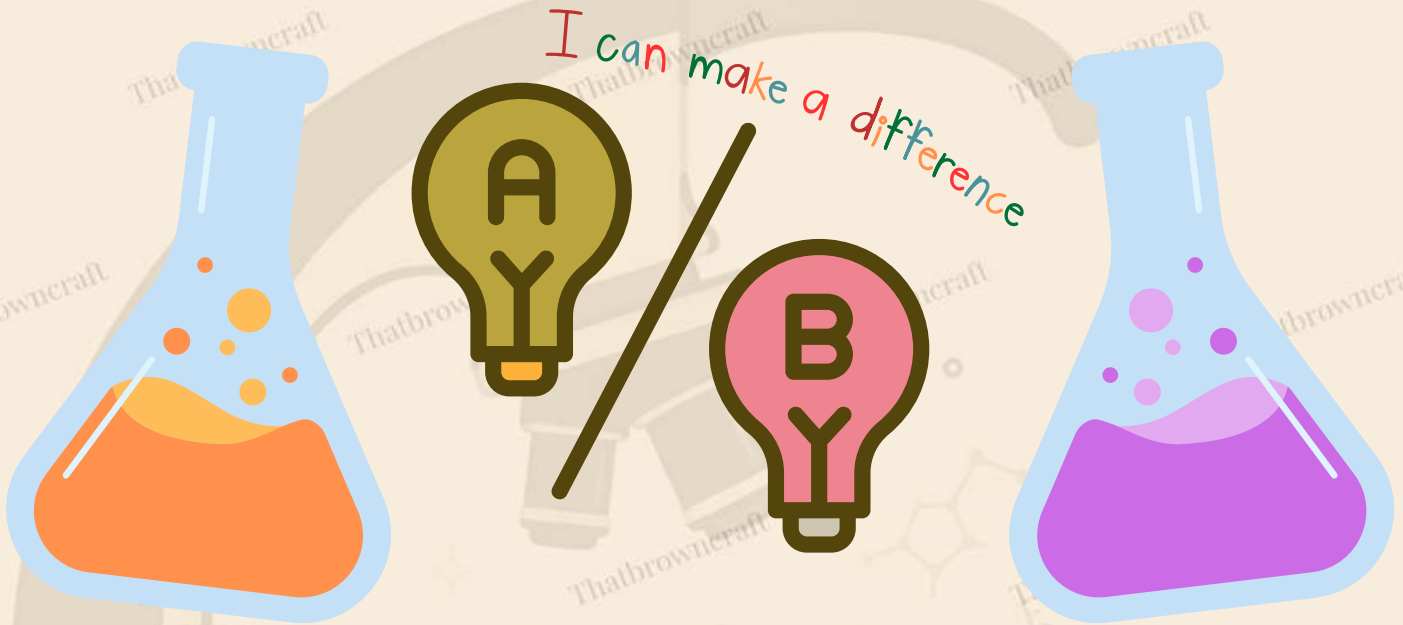

COMPARE

*Compare topics with
Related ones .*

10. COMPARISON STUDIO

When two things look suspiciously identical in your notes, put them side by side.

Comparison Studio is built for the moments when rereading two chapters is not helping. It lets you inspect two topics through shared aspects and differences, with misconceptions, memory hooks, Gen Z Notes, notes and review information where available.

If you keep confusing the same two things, compare them once properly instead of rereading both chapters again.

**SIDE BY SIDE
ASPECTS**

**MEMORY
HOOKS**

**KEY
DIFFERENCES**

**GEN Z
NOTES**

**COMMON
MISCONCEPTION**

**PERSONAL
NOTES**

11. STUDY VAULT

The place where your study trail comes back together.

A GOOD RETURN LOOP

Save » review » add a note » mark reviewed » return later. The goal is not to collect everything. It is to build a useful trail.

CELLFIE TIP:

If you saved it three months ago and can still find it in ten seconds, Future You will be impressed.

- *Study Vault brings together personal study material saved across Cellfie, including notes, highlights, bookmarks and reviewed information where supported. It also provides a route into important study areas such as the Periodic Table.*
- *Think of it as the difference between “I learned this once” and “I can actually find what I learned.”*

NOTES

- *Cellfie becomes much more useful when you make it yours.*
- *Notes, highlights, bookmarks, favorites, saved laboratory items and reviewed states form the personal layer of the study experience where supported.*
- *These actions mark what you found useful, confusing, memorable or worth returning to.*

HIGHLIGHTS

Highlight your fav & Important lines, keep it forever.

MAKE CELLFIE REMEMBER WHAT MATTERED TO YOU.

CELLFIE TIP:

These actions form the personal study layer. They are not just decoration. They are how a large science library slowly becomes your science library.

- *Write the explanation your future self will understand.*
- *Mark the exact part worth returning to.*
- *Keep important concepts close.*
- *Collect useful study or lab material.*
- *Mark what you have already worked through.*

11.1 PERIODIC TABLE

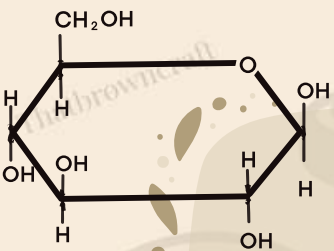

118 elements, families, trends and memory tricks.

The image displays a periodic table with a brown and tan color scheme. Three elements are highlighted with red-bordered boxes:

- Neon (Ne):** Atomic number 10, atomic weight 20.183.
- Calcium (Ca):** Atomic number 20, atomic weight 40.08.
- Magnesium (Mg):** Atomic number 12, atomic weight 24.312.

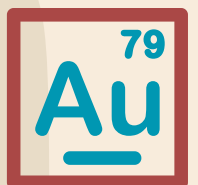

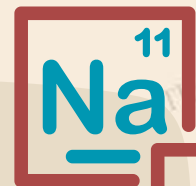

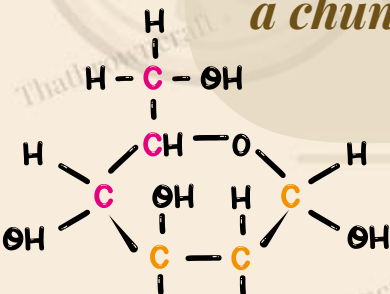

The periodic table is organized into rows and columns, with elements represented by colored squares. The highlighted elements are located in the top row of the table.

Cellfie's Periodic Table is an interactive reference and learning space. Element details include atomic number, symbol, name, atomic mass, group, period, block, family, valency or oxidation-state information where provided, electron configuration, properties, uses, biological relevance and learning notes.

MEMORY TRICK

The strongest memory system is not one magical mnemonic. Use multiple strategies for learning elements in atomic-number order and by pattern. Do not brute-force all 118 elements in one sitting. Learn a chunk, recall it, connect the pattern, then come back later.

12. EXAM-PREP

Make the study space feel like yours.

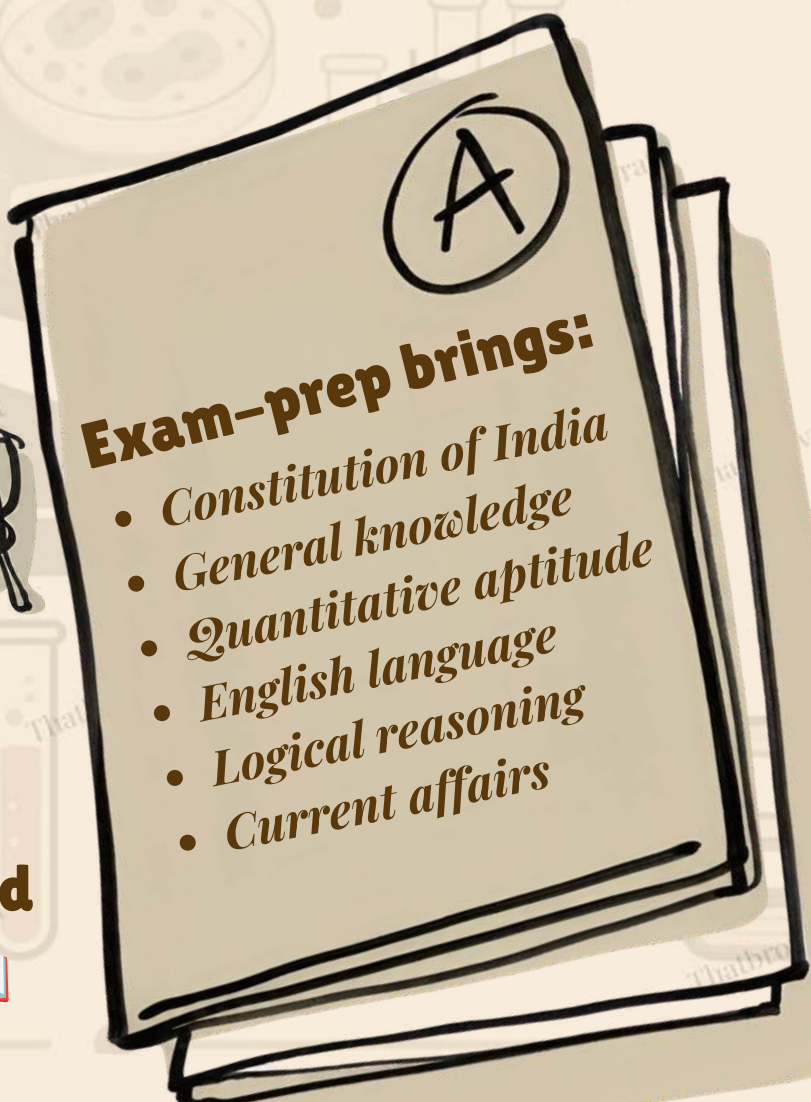

Exam-prep turns Cellfie into a focused space for competitive-exam preparation, with topics broken into actual learnable sections instead of making you fight through giant textbook paragraphs.

How it teaches?

Concepts » Examples » Key Facts » Shortcuts » Exam Traps » Quick Revision » 🧠 Memory Hooks

Every curated topic gets its own Gen-Z-style memory aid, because remembering something is slightly easier when your brain isn't being held hostage by a 700-page textbook

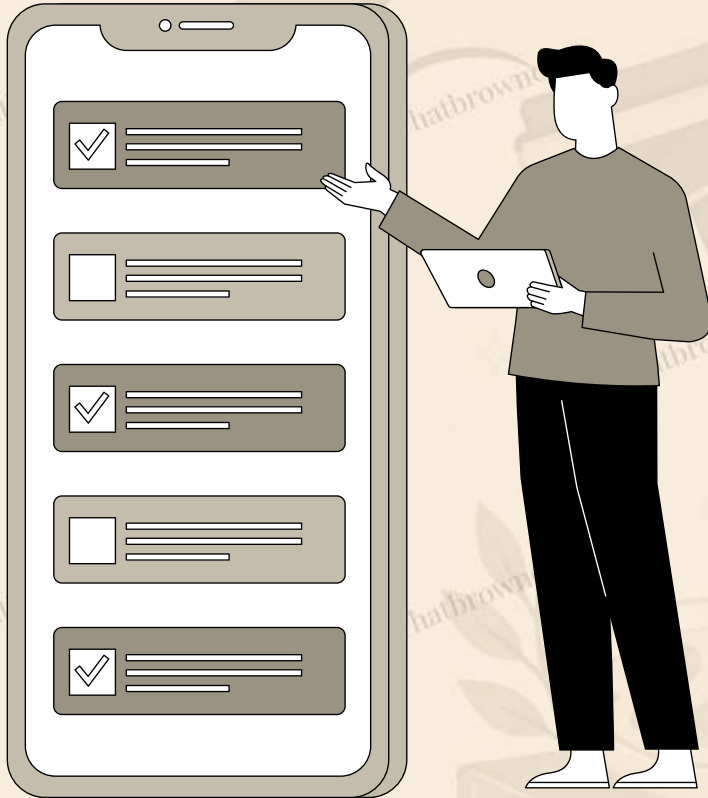

- 
- Constitution of India
 - General knowledge
 - Quantitative aptitude
 - English language
 - Logical reasoning
 - Current affairs

Learn smart. Revise faster. Get less cooked by the syllabus 🤔📖

13. SETTINGS & PERSONALIZATION

Make the study space feel like yours.

- *The current manual describes Appearance, Reading, Accessibility, Data, Modules and About.*
- *The User Manual belongs above About in Settings so it remains easy to find.*
- *The manual should be available to read inside the app and to download for later reference.*

A FEW THINGS WORTH REMEMBERING

Your source stays yours.

CREATOR COPYRIGHTS

Made with curiosity, science and a suspicious number of notes.

Cellfie and its original application design, writing, curated educational material, structured datasets, memory aids, Gen Z Notes and other original creative material are created and maintained by thatbrowncraft.

Third-party textbooks, references, scientific sources and user-provided materials remain subject to their own rights, licenses and terms.

Importing or using a source in Cellfie does not transfer ownership of that source. This manual is original Cellfie material intended to help users understand and use the application.

THATBROWNCRAFT

made for curious minds & complicated science.
